existing adware. I. Gender-specific interstitial lung disease. Interstitial lung disease (ILD) encompasses a wide spectrum of progressive diseases involving the lung parenchyma. These disorders can be broadly classified as idiopathic or secondary to other diseases. Although the demographics, pathophysiology, clinical characteristics, and prognosis of ILD patients are different between men and women, data regarding gender-specific ILD are still scarce. Many researches have been conducted in order to highlight the epidemiology, pathophysiology, clinical features, and outcomes of women with ILD. Moreover, little is known about the burden and economic burden of ILD for both genders. The study of gender-specific ILD may help to improve the knowledge on the diseases, and it may also lead to the development of new diagnostic and therapeutic approaches for these patients. The efficacy of different surgical options in treatment of a herniated disk. The purpose of this study was to evaluate the efficacy of different surgical options in the treatment of a herniated lumbar disk. This study was a retrospective case series. A total of 143 patients were divided into 3 groups based on the different surgical options employed: simple laminectomy, laminectomy and discectomy, and laminectomy, dis 82157476af
